(54) FACSIMILE DIAGNOSING DEVICE

(57)Abstract:

PURPOSE: To easily perform diagnosis on a facsimile equipment with different machine specification, manufacturing time, and program version, etc., by receiving device recognition information transmitted from the facsimile equipment, reading out a desired diagnostic program based on the information, and performing the state diagnosis of corresponding facsimile equipment.

CONSTITUTION: A facsimile diagnosing device 11 outputs first a request to transmit the device recognition information such as the program version, a machine specification number, a manufacturing number, etc., set at the facsimile equipment 12-14 to the facsimile equipment 12-14 to be diagnosed. And the equipment 11, when receiving the device recognition information from the facsimile equipment 12-14, reads out a corresponding diagnostic program from a various kinds of diagnostic programs set in advance based on the information. The states of the facsimile equipment 12-14 are diagnosed based on a read out diagnostic program. In such a way, accurate diagnosis can always and easily performed on the facsimile equipment 12-14 with different machine specification, manufacturing time, and program version, etc.
